## Ancient Greece | History | Years 5 & 6 | Spring Term 2023-24

## Key Learning: When did this event happen? Beyond Living Memory (pre-history to classical era) 776BC to 146BC 1 Where was Ancient Greece and how was it structured?

Greece is located in south-east Europe. Its mountainous terrain (80%), composition of mainland plus over 1000 islands, and surrounding by three seas led to the formation of city-states, each with their own laws, armies and system of government. 2 How do we know so much about Ancient Greece?

interpretations. 3 When was the Golden Age of Ancient Greece? The Ancient Greek civilisation occurred alongside the Ancient Romans, Ancient Egyptians and Celts (Iron Age). The Golden Age spanned from 500-300BC and was a time of remarkable cultural growth. 4 What was Athenian democracy?

Archaeologist, Sir Arthur Evans, made discoveries related to the Ancient Greek Minoans on Crete (2200-1450BC). Historians have analysed a range of artefacts to learn about language, events, people, sport, beliefs and gods of Ancient Greece, although sometimes they have differing

Athenian democracy comprised three bodies: the Ekklesia (assembly), the Boule (council) and the Dikesteria (courts). Only Athenian citizens (wealthy men who had undertaken military training) cold take part so it excluded: the poor, women, children and slaves. What were the causes and effects of the Peloponnesian wars? The city-states of Athens and Sparta, who had key differences in the ways the were organised and run, led to in-fighting within the Greek Empire, known as the Peloponnesian wars. Despite these differences, the city-states would unite to provide a stronger defense against

external threats (e.g. the Persians). Sparta ultimately won due to their more powerful army and defeat of the Athenian fleet but refused to destroy Athens or enslave its people. Instead, they set up an oligarchy and tore down Athens's wall. However, only a year later the Athenians over-threw the oligarchy and restored democracy. 6 Who was Alexander the Great?

Alexander became King of Macedonia (a city-state) in 336BC at the age of 20. After many years of fighting, he brought all the Greek citystates under his control and turned east, to the Persian Empire, for further conquests, defeating King Darius III in 331BC and becoming the King of Persia. Alexander died in 332BC, aged 32, however there is a lack of reliable evidence as to how he died. Why was Alexander so Great?

The Ancient Greek Empire expanded to its largest size under rule of Alexander the Great due to: military strategy and battle successes;

diplomacy, friendships and popularity; following local customs and laws; and integration with local populations. However, because he did not name a clear successor, the Greek empire was divided into three parts upon his death, weakening it and leading to its dissolution. What were the greatest achievements of the Ancient Greeks? The Ancient Greeks are considered to be one of the most influential civilisations in human history. From democracy to philosophy, drama and mathematics, their ideas remain influential to this day. Spread throughout much of the known world by trade, the conquests of Alexander

the Great, and the adoption of their ideas by the Roman Empire, its influence survives to the present day.
