Paris Climate Agreement

On the 12th of December, 2015, 196 countries signed up to an agreement called the Paris Climate Agreement. Their goal was to work together to keep global warming below 2°C or preferably below 1.5°C, higher than in the late 1880s. It was the first time that so many countries had got together and agreed to take action to limit the impact of climate change.

Every five years, the countries get together and agree on increasingly ambitious actions that they will attempt to carry out. This might be a reduction in harmful emissions, increasing the number of electric cars on the road or other changes that will have a positive impact.

Part of the agreement involves wealthier countries helping poorer countries to meet their targets. While this may seem unfair to some, it is important to remember that climate change, much like the COVID pandemic, is a global issue. We can't make effective changes without everyone working together.
